Continuation of 3. NOTE: New claims are added, and the scope of the amended claims has changed significantly; thus, a new search and additional consideration will be required.

Continuation of 11, does NOT place the application in condition for allowance because: Applicant's arguments filed 7/30/2009 have been considered but are not persuasive. In regards to Applicant's remarks that Gonzales teaches only publishing software, and fails to teach where the generated book is a story book, Examiner notes that Gonzales is not relied upon to teach the limitation. Instead, Scocca teaches this at Para. 0032-44. It would have been obvious to use a web publishing system such as Gonzales' to publish any type of book, including children's story books. In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See In re Keller, 642 F.2d 413, 208 USPO 871 (CCPA 1981): In re Merck & Co., 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986). In response to Applicant's argument that Gonzales does not disclose "the first set of inputs," because an "article name or page name" is not "author information"; an "article title" -- in the web page context - is the page (or "article"), not the title of the entire work; in the web-page context or any other, a string of text comprising author, title, or copyright information, etc. is merely non-functional printed matter, and having no tie in function to the substrate, is not patentably distinguished over the prior art. It would be obvious to merely provide the relevant publication data via HTML tags for a webbased publishing software such that it is printed in the traditional manner on the first inside leaf of the book. See In re Gulack, 703 F.2d 1381, 1385, 217 USPQ 401,403-04 (Fed. Cir. 1983), USPTO personnel need not give patentable weight to printed matter absent a new and unobvious functional relationship between the printed matter and the substrate. See also In re Ngai, 367 F.3d 1336, 70 USPQ2d 1862 (Fed. Cir. 2004) and MPEP 2106.01. With regard to Applicant's arguments at pages 13-14 that Scocca fails to teach one or more indicia for indicating how to assemble the pages in diametric contraposition, Clements '172 at (6:27-48) teaches: "In order to create a storytelling book in accordance with the invention, a corresponding insertion page having a picture, and preferably some text as well, corresponding to the picture on the original insertion page is generated either manually or mechanically (e.g., using a photocopier or a graphical computer program). This step of generating a series of corresponding insertion pages having corresponding pictures and text is most preferably done by having the creator of the story write the text on a corresponding lined insertion page provided with the book. Most preferably, this lined corresponding insertion page has two columns of dotted lines with the instructions "Write your story using these lines' noted in parentheses at the top of the page. On this lined corresponding insertion page, a space without lines is provided in the lower right-hand corner with the instructions. Paste a reduced size copy of your picture here noted in the space. A reduced-size picture corresponding to the picture on the original insertion page may be created either manually or mechanically, and then pasted in the indicated space. Alternatively, the corresponding picture may be of any size, and may be considered the corresponding insertion page itself." Thus, the rejection under 35 USC \$103 does not rely upon Scocca to teach this limitation, as Clements '172 teaches providing instructions for assembling the book pages in diametric contraposition as indicia in the story book. Applicant's arguments further directed to Clements '172 are not persuasive. The courts have held that broadly providing an automatic or mechanical means to replace a manual activity which accomplished the same result is not sufficient to distinguish over the prior art. See In re Venner, 262 F.2d 91, 95, 120 USPQ 193, 194 (CCPA 1958). Applicant arguments with regard to the Schubert reference are also not persuasive because one of ordinary skill in the art would clearly understand copyright information on the first leaf of a book to refer to the copyright date of the book, not of a software program used to generate the book. See applicant's Figure 2. Item 200: in this case, (c) 2004 Jehan Clements refers to the author of the story, not of the software used to generate the book. Applicant's arguments with regard to Schach are also irrelevant as Clements '172 is used to demonstrate a teaching of the page orientation being "in diametric contraposition" (i.e., opposite to one another). See paragraph 6 above. The publishing templates of the system and method for of Gonzales would be used to produce the storybook, having an "a" set of pages including identical or closely corresponding graphics and illustrations as a "b" set, but not including the corresponding words or printed text, of Clements '172, in order to easily allow a user to specify, preview, and remotely produce the storybook document in volume, that is, the positioning of the pages would be merely determined in advance to facilitate printing. The content of the indicia of the pages is not a distinguishing basis for patentability. Gulack, Id. With regard to applicant's arguments that examiner has not made a prima facie case of patentability due to failure to provide adequate reasons to combine the cited references, see pages 16-19, applicant's emphasis added remarks highlight examiner's explicit and sufficient rationale for combining the references. In this case, one would want to combine improvements from Scocca, Clements, Schubert and Schach with the base invention of Gonzales in order to receive the well-known and expected benefits applicable to book publishing (e.g., proofing, preview, professional touches, hard covering). As such, examiner provides for A in view of B; A in view of X, and A in view of Y, etc. in terms of the recited limitations. As such, applicant has not proffered specifically where examiner's rationale is in error. The focus when making a determination of obviousness should be on what a person of ordinary skill in the pertinent art would have known at the time of the invention, and on what such a person would have been reasonably expected to have been able to do in view of that knowledge. This is so regardless of whether the source of that knowledge and ability was documentary prior art, general knowledge in the art, or common sense, See MPEP 2142 (Rev. 6, Sept. 2007). KSR International Co. v, Teleflex Inc. (KSR), 550 U.S. 398, 82 USPQ2d at 1385 (2007). For the above reasons, examiner's position is that a proper prima facie case of obviousness has been made in the above action.
